

SOLAR POD CONCEPT 2024

PRELIMINARY STEP 01 - 05.06.2024

EACH PROJECT IS AN EXCITING CHALLENGE...

With many years of experience as concept designer in the field of luxury interior & architectural design (yachts, private aircraft, resorts, residential, product design, visual identity...), I work tirelessly to ensure that a superior result is achieved on each project.

Agnès GUIU

THE IDEA

SUN SEA PEACE LUXURY

The solar pod should be considered as a private island offering an exceptional moment of luxury, peace and wellbeing in total immersion in the beautiful sea/ocean environment.

THE CONCEPT

SOLAR POD CONCEPT

The solar pod is a luxury floating villa concept consisting of 2 separated parts :

a/ **the villa**

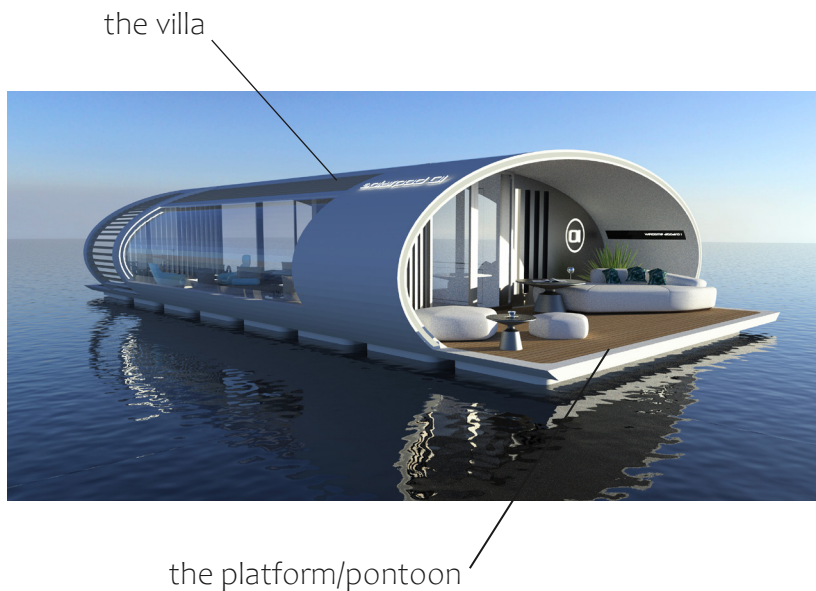

The villa is an oval shape structure with panoramic windows + integrated lighting equipped with solar panels on the roof and back side. The interior design is modern, minimalist with specific attention brought on beautiful details.

2 sizes will be proposed : small size for a couple (living room, dining corner and kitchen, one bedroom, bathroom) and larger size for a family trip showing the same configuration but with 2 bedrooms.

b/ **the platform/pontoon**

The villa is fixed on the middle of a floating platform offering 2 large terraces : the welcome terrace and the beach terrace. A jacuzzi may be proposed as an option so as to offer maximum comfort and allow a most enjoyable stay.

The platform is positionned on top of strong inflatable floaters offering both perfect balance and floatability.

SOLAR PANELS

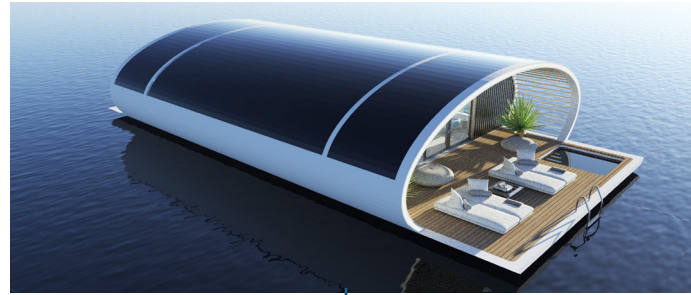

In order to offer maximum autonomy to the pod, flexible solar panels will be fixed on the roof and on the backside.

SOLAR POD PRESENTATION

BEACH TERRACE

This is the place where to relax and enjoy a bit of sunbathing. A flush jacuzzi will be positioned in the corner for maximum comfort and wellbeing. Easy access to the sea with mini chrome ladder. Indirect soft lighting will be installed in large rh & lh plant vases (or side stowage/coffee table) and provide subtly sophisticated atmosphere at night.

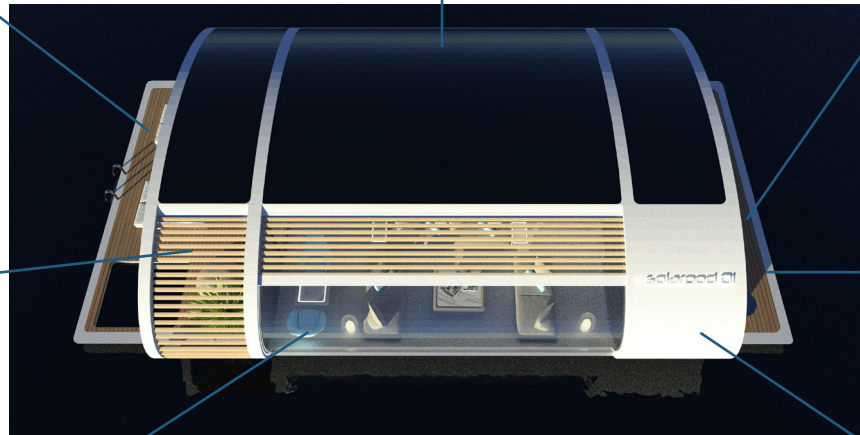

WELCOME TERRACE

This is the place where the owner / guests will arrive and step first. It has to look extremely welcoming and offer light and shade. Discreet decorative lighting will bring a touch of refinement.

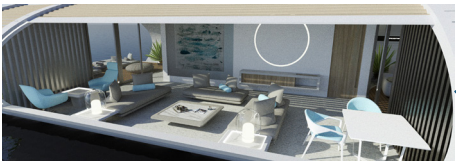

CURVED LOUVERED PARTITION

This partition will be equipped with fixed wooden louvers that will provide a bit of privacy (in case of a resort with other solar pods next to this one). They will offer two positions : open/close.

PLATFORM / PONTOON

Platform covered with wood on top and fixed on inflatable floaters discreetly positioned in recess so they are not visible. The solar pod will seem to float naturally on water !

INTERIOR

2 configurations will be proposed :
A/ couple : living room, dining corner and kitchen, one bedroom, bathroom
B/ family trip : showing the same configuration but with 2 bedrooms.

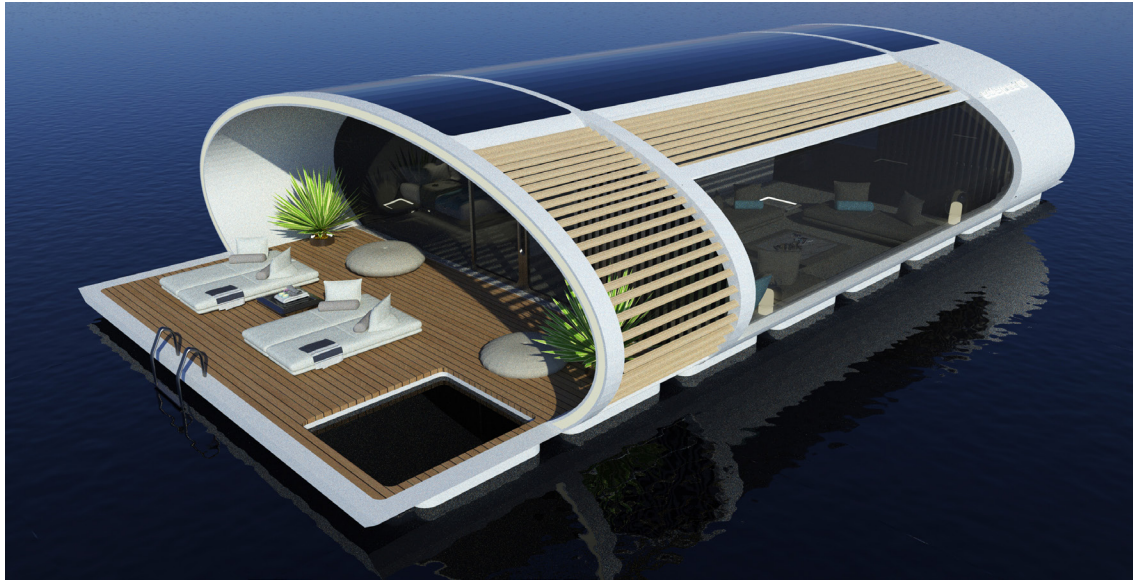

FRONT SIDE

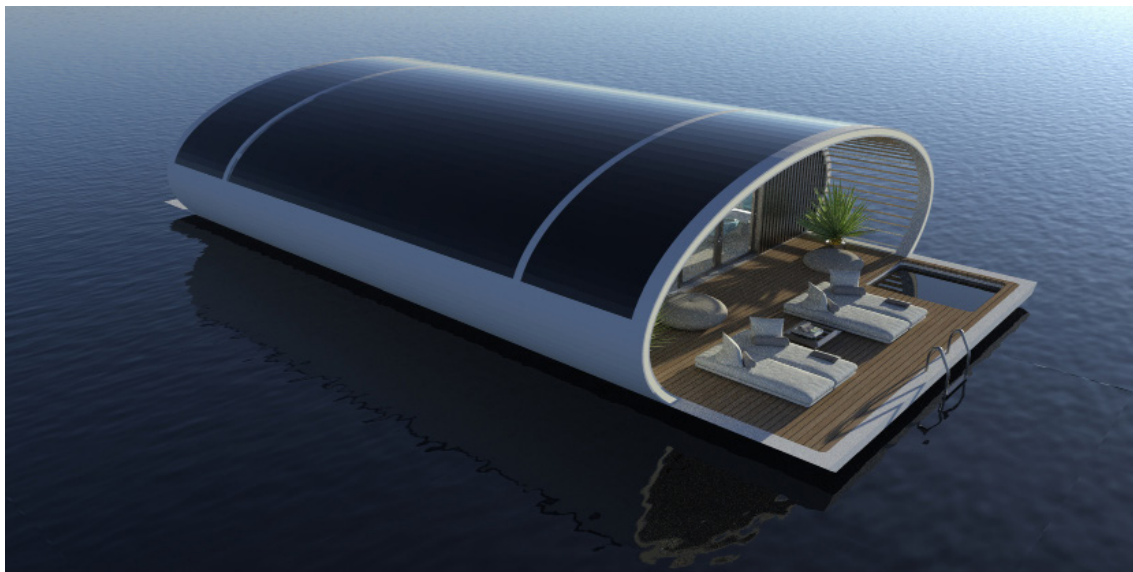

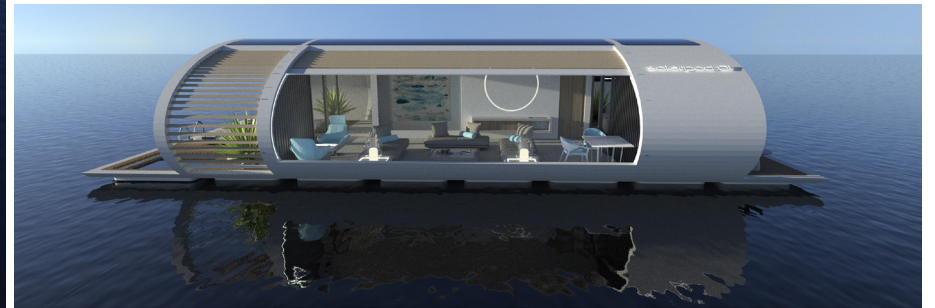

An extra large panoramic window will offer a fantastic view on the surrounding landscape. It will be equipped with sliding (up/down) electrical louvers so as to offer welcoming shade during the hottest hours of the day and total privacy at night.
On both rh & lh sides are plain and louvered terrace curved partitions.

SOLAR POD STRUCTURE

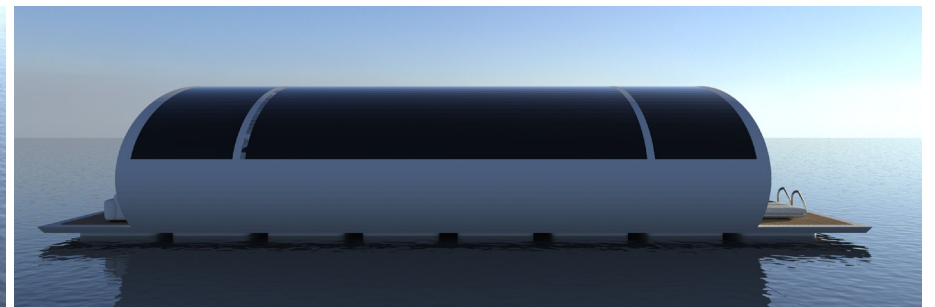

Curved partitions consisting of metal oval / arch profiles and horizontal profiles on which will be fixed plain panels, security glass panels, solar panels, louvers (electric and sliding), inside partitions... It will also integrate washlights, illuminated solar pod name or number so it is visible from far.

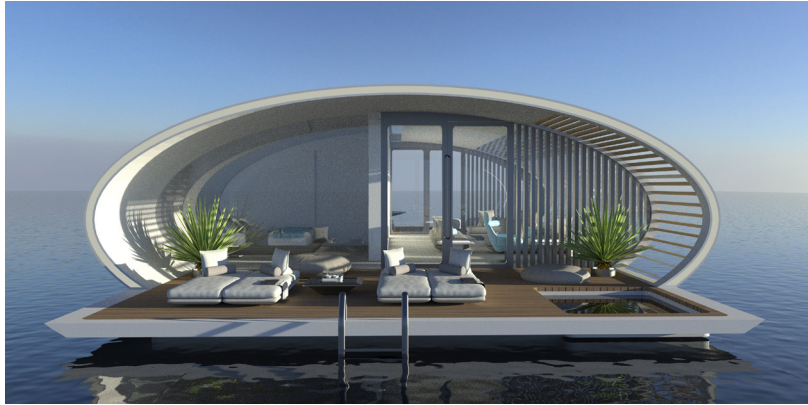

FRONT SIDE

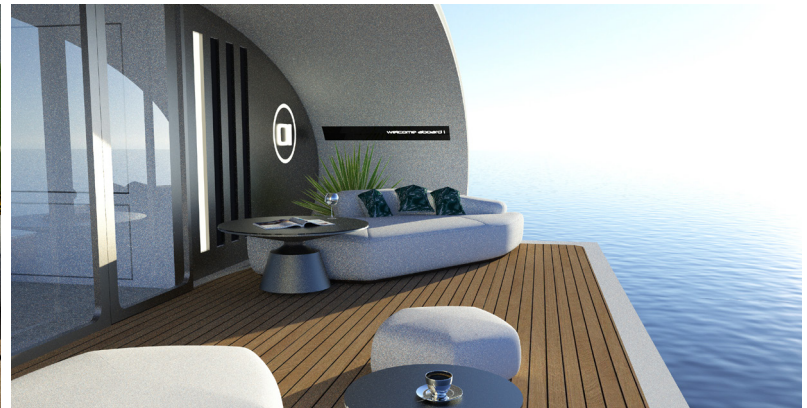

BACK SIDE

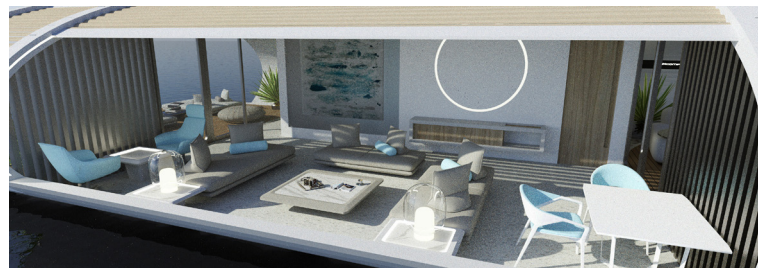

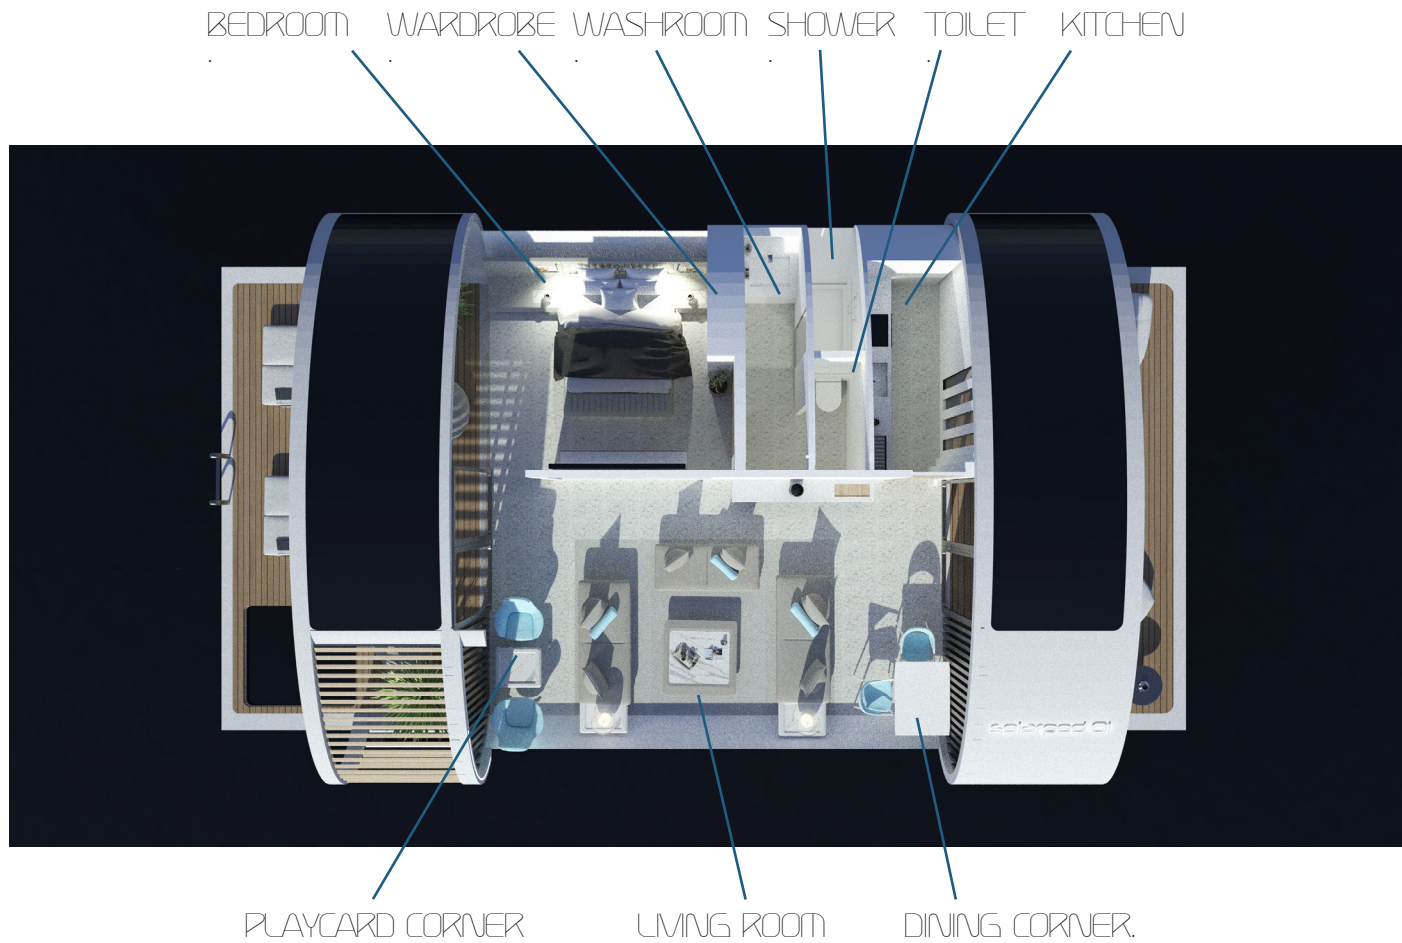

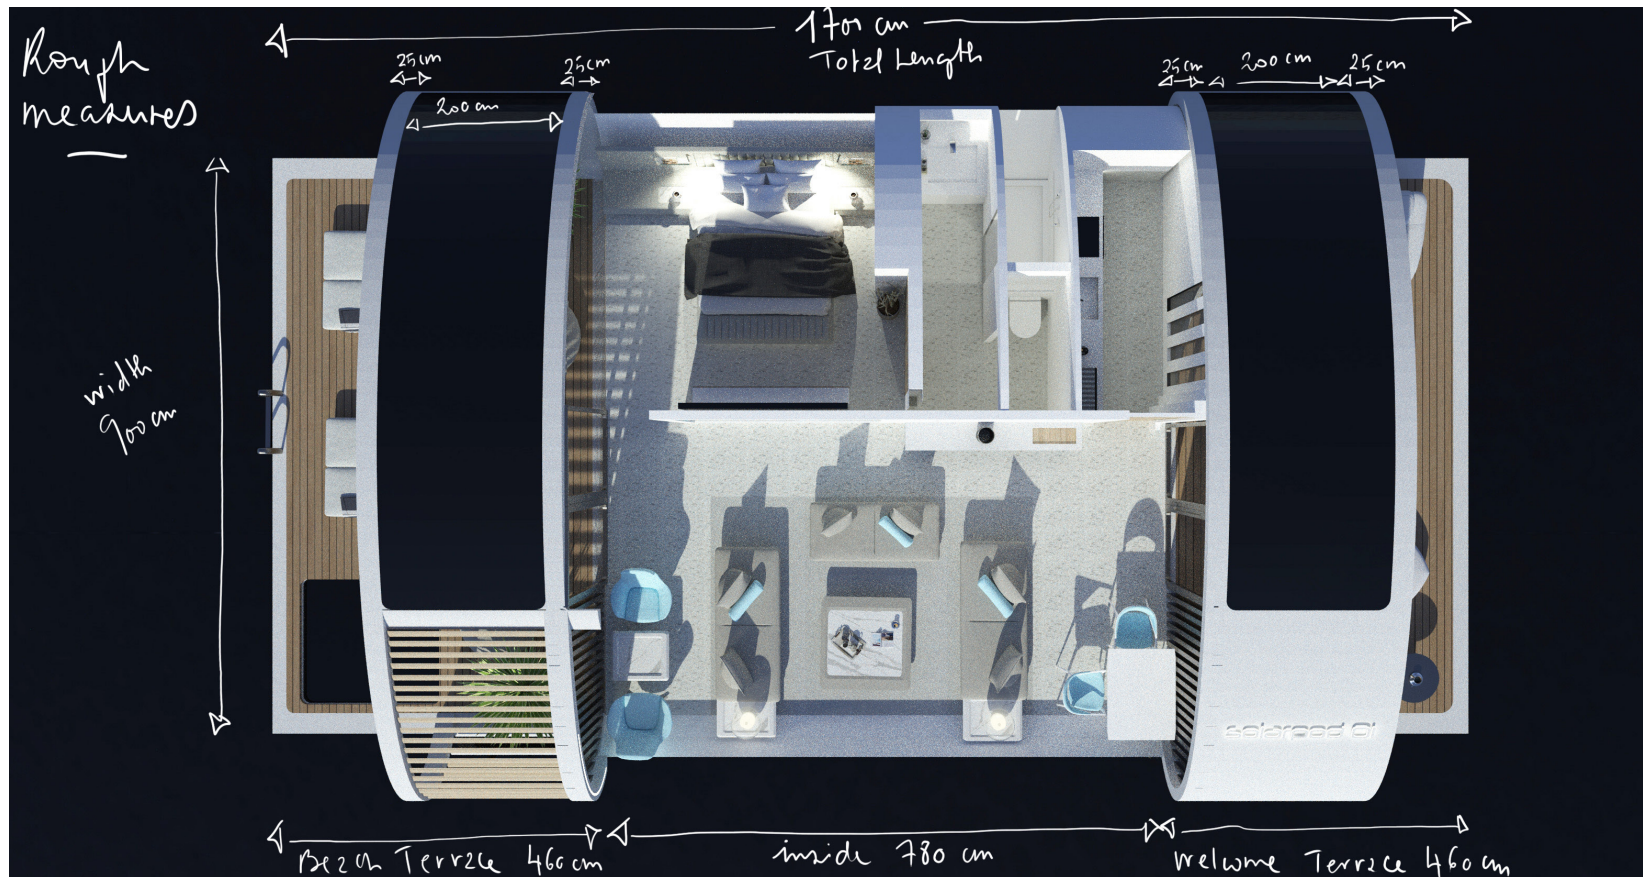

BEACH TERRACE

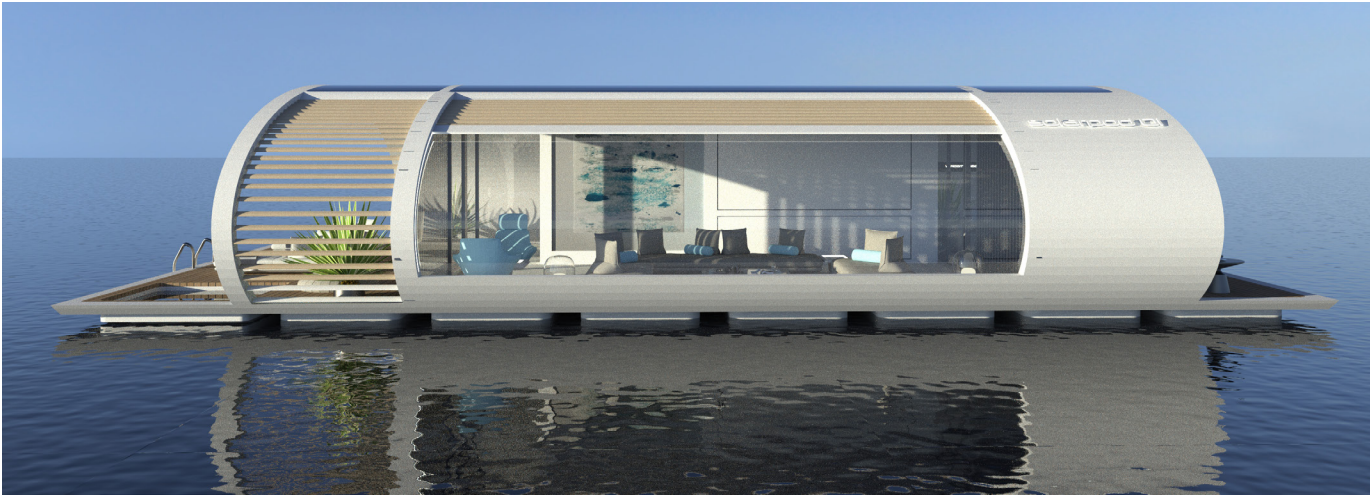

WELCOME TERRACE

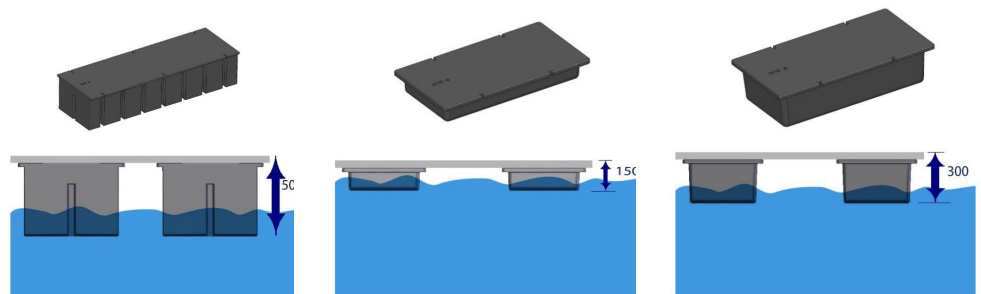

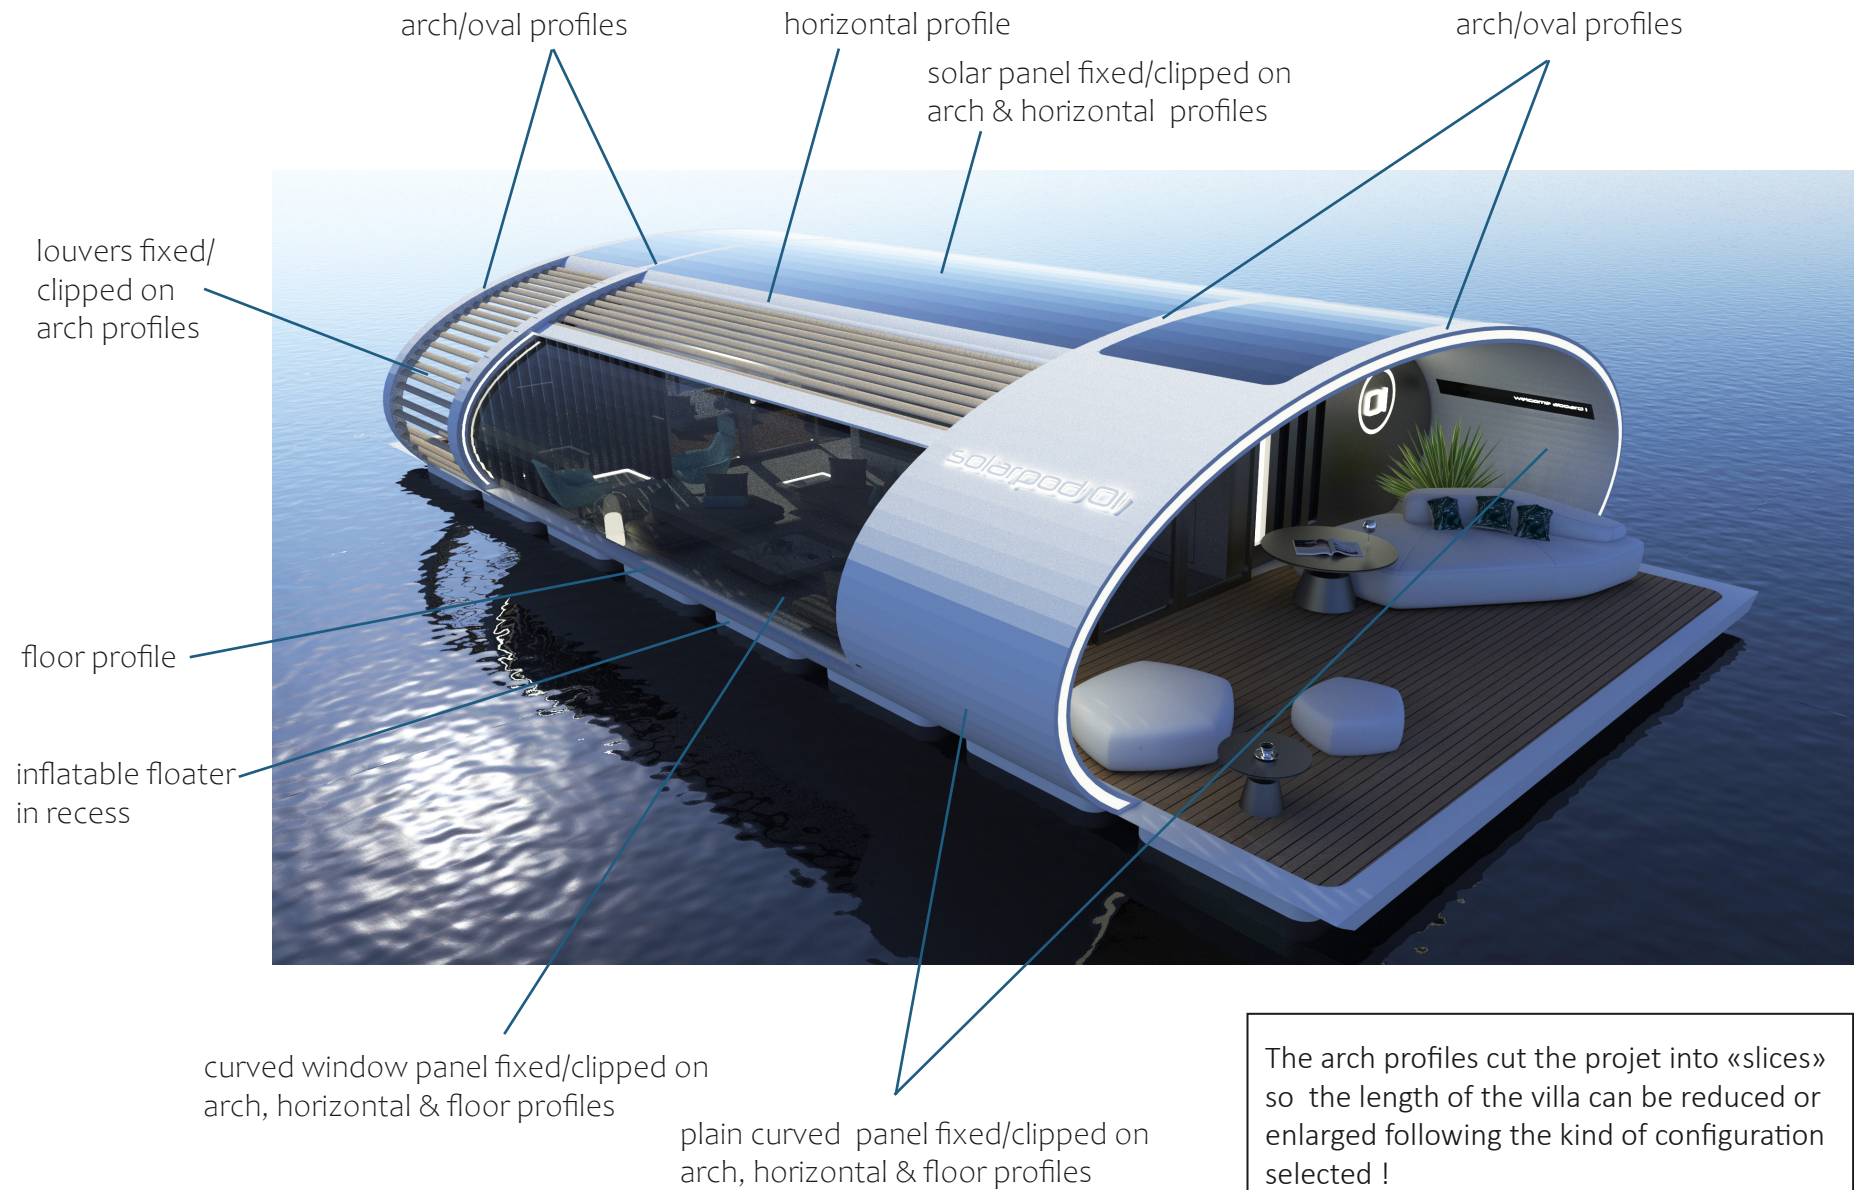

The solar pod villa is fixed on a pontoon covered with wood on top with inflatable floaters underneath positioned in recess so you don't see them at all.

The solar pod will be stabilised with anchors- position tbd.
The pontoon can also be equipped with motor like a boat.

Proposal open to discussion, suggestions from your part.

hoping to hear from you very soon...
